

Depth First Search

- Input: $G(V, E)$
- Output: $d[v]$ & $f[v]$
 - ↓ discovery times
 - ↓ finishing times
- Timestamps start at 1 & end at $2|V|$
- $1 \leq d[v] \leq f[v] \leq 2|V|$

Parenthesis Theorem

for u & v nodes, if:

- $d[u] < f[u] < d[v] < f[v] < d[u] < f[u] \rightarrow u$ & v are not descendants of each other. (they're in different trees)

(or)

- $d[u] < d[v] < f[v] < f[u]$ (or vice versa) v is a child of u , u is a child of v .

exu

u (1, 12)

v (2, 7)

$d[u] < d[v] < f[v] < f[u]$

1 < 2 < 7 < 12

↳ v is a child of u
